

PRESS RELEASE

For Immediate Release
September 26, 2011

ENHANCE YOUR RIDER'S EXPERIENCE.

State College, PA – Avail Technologies, Inc. is pleased to unveil the future of ITS Technology—and their exciting new look—at the APTA Expo 2011 in New Orleans, October 3-5, 2011.

After years of working hand-in-hand with transit professionals across the country, Avail's experience has helped them to develop a feature-rich, turn-key solution of cutting-edge technology that will help take your transit operation to the next level. Here are just a few of the exciting new features Avail will be demonstrating at the APTA Expo:

- Electronic Fare Collection System
- Role-based user interfaces
- Automatic data-mining that continually monitors operational performance metrics for you, allowing you to focus on running your agency
- Unique notification system that provides personalized alerts of potential issues, enabling the user to proactively respond before they affect operations
- And more!

"For more than two decades, technology companies have been providing transit operators with data they hoped would answer operator's questions. Today, Avail is turning the tables by asking those same operators what their questions are, and then mining the data for them to provide the answers with recommended solutions," said Dorsey E. Houtz, President & CEO of Avail Technologies. "I'm confident this concept will change how the industry looks at CAD/AVL technologies forever, and I couldn't be more proud or excited that Avail is at the forefront of this approach."

About Avail Technologies

Avail is an Industry Leader offering **Progressive ITS Technologies**, integrated into your Transit Operation by following **unique and innovative Project Processes**, consistently backed by **Traditional Values**.

APTA Expo – New Orleans

Stop by Booth #3033 for a live demonstration of their new Technologies focused on the user—while enhancing your rider's experience.
