

Systems Engineer.

Looking for a change? Do you like to be challenged? Would you like to work for a company who's small enough that your achievements get recognized, but large enough to offer the stability and job security we all need? Then you should consider working for **Avail Technologies, Inc.**

The Avail Systems Engineer provides technical expertise for the lifecycle of hardware and software systems to include concept development, system requirements and design, systems analysis, baseline management, architecture development, system specifications, product evaluations, decision analysis, transition planning, and operations. Embedded software development experience is a plus. Travel will be required.

SKILLS NEEDED:

- Highly motivated self-reliant individual with the desire to work as a team player who has strong organizational skills and a methodical approach and desire to solve challenging technical issues
- Technical leadership of analog and digital circuits design as needed to integrate varied components
- Experience with setup of advanced wired and wireless TCP/IP architectures
- Proficient in the configuration of Microsoft Windows workstations and servers with strong knowledge of SQL database structures
- Ability to read and debug code in C#, C++ or related high level language
- Ability to lead, motivate, and mentor lower level software and systems integration engineers
- Work closely with the program manager and system integration & test personnel
- Manage internal resources to complete project within schedule constraints
- Identify and mitigate program risks
- Prepare and present system documentation and reviews
- Ensure compliance to Avail processes

EDUCATION:

- Bachelor's degree with 5 to 10 years of related technical experience.
